1.)

Giving birth to an infinite impetus - which might be best referred to as technology - was conducted by us. Starting from the Industrial Revolution, humankind initiated to make various machines to be served for an endless easiness and take a seat for a while to have some rest in busy everyday life. After adopting significant improvements in technology, there was no _____ . Taking over places where humans had to be, machines were composed intricately and accurately rather than have had numerous problems. Having a much more sophisticated process of making products, processing much faster with almost no defects, and working for a much cheaper cost (or none at all) was what to be called the most breathtaking idea of utilizing machines - or technologies. As years pass by, starting with those who cannot live without cutting-edge technology, it started to show off those who are overwhelmed by scientific development to behave as passive agents of technology; therefore, it led to the problem of the inability to take a self-indulgent attitude.

- 1) freedom to choose by their own purpose
- 2) room to pass through massive industrial systems
- 3) passive agent who only seeks for cutting-edge knowledge
- 4) single person who gives attention to scientific development
- 5) common goal for making another impetus at all

2.)

The versatile individual making unambiguous improvements to the overall ambiance in the workspace is still an ongoing idea for a few scholars which might be referred to as an obsolete way of thinking by others. Though commensurate employees playing single games might be significant to provide a successful profit-making system, a collective structure can vest collective wisdom in a general environment - they say. In modern cases, pseudonymization or being in an anonymous state in a company's online community space can induce a chaotic network since it can make individuals assert novel ideas that might produce incremental net profit somewhen. Escalating those incorrect assertions to exemplify in much general terms, it might be the problem of being educated in a group network for decades (in schools), putting one never by himself to be left out of the jungle. To remind, teachers calling students to settle problems given out as assignments have told us to make sure to have solutions in congregated form. In most cases, inducing disorder to lower efficiency was held. As well as the given example so is the company's environment.

- 1) Ineffective factors are produced by individual network
- 2) Rendering individual tactics to an overall structure is necessitated
- 3) Conducting profitable tasks is important above all.
- 4) Mass psychology can produce wise answers above all
- 5) Collective method should be crucial in decision-making process

3.)

The invention of a distant network was the first step in advocating for the right to communication for every participant living in innumerable countries. Perceiving the internet as a tool for communicating and finding essential data, the floods became a trepidation to each individual but not the size of a nation or social institutions. From the stance of social perspective, there were immense advantages to letting one monitor others' status quo by using advanced technologies such as social media and expecting how to treat others in the future. Not only belonging to discrete individuals or particular institutions but also working as a commonplace was what could be the pro-side of the worldwide web. Taking the example of individuals, however, though there might be a chance to talk -or chat- with distant people, even in other countries, it became possible to place themselves in a defective ethical state behind the property of the web spaces. Problems that had risen above the surface were especially that the internet was characterized by pseudonymization resulting to _____ behind the barrier of nicknames and other covers. Compunction had no chance to be in each player; especially on the internet, while they had conducted offensive actions on others.

- 1) induce higher chances to be morally flawed
- 2) confuse others to make spin-off problems
- 3) to be in an emotionally wounded state
- 4) solve the problem of being mean to others
- 5) discern true differences of individuals

4.)

Poverty is a slowly emerging consequence of a "practice," which refers to a social convention that the majority of individuals in society engage in. The spreading process may occur gradually and appear to have no instant effects, but it ultimately puts every stakeholder in a precarious state in the long run. The term "practice" is not only related to culture or social convention but also to economic circulation, which can go through a vicious cycle. This cycle is subject to currency and monetary businesses that take place worldwide every second, affecting everyone's assets and financial well-being. In the face of economic stagnation, governing bodies must act _____ and decisively to prevent the depletion of citizens' valuable resources. If a vicious economic cycle takes hold, control towers must take measures to mitigate the damage. The more flexible is far better, as prolonged inaction could result in dire consequences eventually leading to the congestion of worldwide currency.

- 1) swiftly
- 2) wisely
- 3) slowly
- 4) indecisively
- 5) widely

5.)

Although technological inventions have been considered an effective tool for approaching the integrated principle of the whole universe, paradoxically, they couldn't manage themselves to be much more effective; though the technologies have progressed, it was impossible to present much more complex notions as they would have had no similarity to humans' characteristics such as being able to store given information and apply them to somewhat identical situations with relatively simple methods. Until the previous modern days, it was clear that there exists an unambiguous partition between humans and technological inventions - such as computers - which turned out to be assumed wrong since the advent of highly developed Artificial Intelligence, or AI. Nowadays, AI is prevalent in every place where humans wanted their assistants to be; moreover, it is an era with _____.

Instantly accumulating data on each problem and following responses in a specific interaction, the data is considered a fundamental prerequisite for their intellectual development; therefore, the ever-lasting information-interacting situation evolves them to be in an unprecedentedly advanced level of searching for ways to develop themselves. It does no doubt to say that present society consists of convoluted engagement between humankind and digital creatures.

- 1) critical factor leading to another division
- 2) suitable condition to settle intricate ideas
- 3) decisive stimulus to prolong successive innovation
- 4) new factor to let humans envision more complex interactions
- 5) accumulated resemblance thanks to intricate interplay

6.)

What if the doomsday is not left so far but only happens in 3 days? What if every particular object's properties are gone in a few days? These kinds of imaginative thinking might be a stimulus to drive individuals toward the ideal where every property and the lovers won't be gone with security reserved everywhere and stable economics persisting in the world; however, overall comprehension of reality might be the tool for pioneering the ideal world as well. The capacity to manage those two contrary subjects is what is known as a crucial point to handling the group's goal to let it "turns out to be true." In case individuals have one urgent situation to suffer from the fact that the negative way of thinking is the only what they can do in that some possible factors might cause them to feel depressed, individuals ought to know that the ideal is not so far from their imaginative thoughts and a practical way to reach the goal can be established from a relaxed point of view on the situation. Namely, an optimistic standpoint and tranquility would put us in _____.

- 1) contentment
- 2) intension
- 3) indulgence
- 4) stability
- 5) persistency

7.)

A marked contrast from past million years ago, humankind has developed to mesmerize others to make their statements have public validity. However, words cannot catch the advantages overall as it only describes factors with no chances to make others be part of their group at all -early humans would have said. What to be underlying is which can be pointed out as crowd psychology in case you have to make ordinaries advocate for your standings, or, a political position. In the case of early homo sapiens, they would not have been able to think of themselves as political creatures in and of themselves, acting as if they had no reason to persuade others. They wouldn't have been able to treat others as the dominant factor of their public standing, ultimately living on their own but just being in a group; however, in modern cases, it is quite contrary to the past as people are trying to contact to each other to get votes and advantages over others. An example of domino best illuminates modern cases. Modern humans have to push down the smallest scale domino (one individual to be persuaded) first and ultimately push down the biggest scale (most of them nodding to your words) at last, taking motion to have others follow my words. Our ability to _____ became a crucial factor in overall success in modern days.

- 1) make others active in conference
- 2) let others have communication
- 3) make others gather around
- 4) form public opinion
- 5) sustain individual characteristic

8.)

These days, society is suffused with vertical structure. Redundant issues hanging on the current problems are aggravating the phenomenon which is forcing the lowest figure to conform to the compulsory policies since they have no option but to fit into the governmental suggestions. With few people asserting that there is no such problems as the societal boundary already got abolished, leading to the ignorance of the alarming status quo of the society got spread, inducing most of the people not to perceive the reality which implies that people are being ordered according to their status, authority, power, or efficacy on economics. To a range of extent, individuals playing as active agents in eliminating those vertical behaviors became crucial. As every individual is a critical participant in forming the societal perspective of others, each individual has the burden of discerning _____ of all individuals to have those corrupted practices abolished. To a common extent, the prevalence of social hierarchism is a significant hindrance to the formation of a fair and reapable society, which leads people to feel that they have much more incentives and motivations to work, teach, direct, and etc. By working together for a move of level positioning, there is no doubt it would be the new impetus for developing the society once again.

- 1) what to be taken as an intricate problem
- 2) what to be seemingly eradicating common sense
- 3) what to be rather considered calculative
- 4) what to be deemed as intruding on the equalism
- 5) what to be making individuals motivated

9.)

Widespread scientific knowledge is a dominant viewpoint that occupies the highest place in our minds. While developments until now can be praised for significant raises in the quality of life, the problems from now on may be addressed in a misguided manner, leading the public to be ignorant and fall into a blindfolded state. These days, individuals have no idea about how innovation goes, not to mention that they are unconscious of the inner side of the developments. While it may have a profitable aspect to the developing process, it would also risk _____. Nowadays, technologies induce depletion, since they appear to drive toward the end of a developmental era. To stop the repetition that consumes resources to seek new inventions, individuals who have critical perspectives on societal issues, associated with scientific innovations, should help us develop prudently by manifesting our society's wrong views and reconsidering new facts, even if they seem unkind at first.

- 1) consuming disposable products
- 2) perpetuating the vicious cycle
- 3) forming misunderstandings
- 4) being unconscious to the development
- 5) making unkind attitudes to others

10.)

Those who have no idea of how to manage themselves in order to handle the given problems that go far beyond their capacity would be likely to insist that _____ forms of communication might be the best method to address complex problems with a complicated causal relationship; furthermore, the reality is that they won't be able to address the intricate problem with adequate manner. Those people managing complex problems that induce to think all possible consequences might be confusing and likely to make the groups' capacity much less than each individual's sum of abilities as they would have problems as mentioned. In the case of having multifaceted problems, they should be able to think much more precisely than any other simple problems. In terms of the word 'precisely' should be able to address much more complicated subsequent results as it might appear to them to have accountability for what they had asserted, provoking them to have a much lesser possibility to claim for what they might consider as the resolution of the problem. The answer might be to have individuals work by themselves, to reduce the dilemma of problem-solving processes.

- 1) congregated
- 2) individual
- 3) precise
- 4) isolated
- 5) separated

11.)

One's achievement is driven by a successful disconnection between the original view and the given situation. Without constant adoption of various aspects, we would likely be conservatives to put off considering adopting options. Individuals having a range of views would lead themselves to acknowledge and seek the status quo to have a wider vision. It is not to say that the achievements would not be the only impetus to lead them to have a wider perspective but to say that the achievement is resultant of a cooperative factor that might be in a mutual interaction between the range of views and one's flexible _____ of the overall situation. In terms of being provided with instant resources to manage the problem, individuals would be able to perceive not only themselves but also the current situation in an objective view, in order to make room for having a higher chance of discovering the faulty factors which lead to having progression into a much greater extent. Not only by being provided resources but also due to the discrimination, they would have much higher possibilities to take what they sought.

- 1) operations
- 2) detachments
- 3) acknowledgements
- 4) managements
- 5) reasoning

12.)

A definite _____ between academic achievements and local competence exists, as the accomplishments outside the educational experience would be assessed with competence based on practical experiences. Not to say that curriculum has no virtue from a general perspective, but to put the educational deeds as subordinate since it would have no direct relevance to the actual accessibility to achievement outside the previous domains. To the extent of education, various subjects would make confusing moments to let oneself choose what they sought but also to make himself skeptical for having innumerable works to do even before they had decided what to aspire for. Even not for the fact that it would put one to be frustrated, those subjects have little coherence to one's goal as those would have incompleteness in and of themselves and unilateral ways of implantation. It would be ideal to have oneself achieve what one wanted through utilizing what one had learned, while one would likely state it as a matter that should be reconsidered after all, as one knows that academic perspective and experiences would not have remarkable effects.

- 1) involvement
- 2) continuity
- 3) relatedness
- 4) void
- 5) subsequence

13.)

With the issue of excessive use of smartphones, we, as humankind, faced problems of _____, which cannot be called simple problems, but matters of intricate complexity. It could be considered a byproduct of digital advancement, thanks to the scientific research and hard work of engineers, while the problem would be likely to be put as misuse by individuals. Not only the matter of abusing smartphones but also could be explained in terms of a network. Those active networks established in various fields have positive effects such as enabling individuals, or those institutions to have precise statistics, which can let the public have a much better resolution of their problems faced. But in case of misuse, innumerable amounts of properties got damaged, with distortion of the credibility of the institution. To a smaller extent, individuals might have overused to introduce countless diseases. It does no doubt to say that in terms of scientific, digital aspects, it caused dramatic effects to found a worldwide network; however, in case of narrower views, such illnesses and avoiding the institution to prevent oneself from being the credulous one would rather cause themselves to have a gap between the government and themselves, eventually making publics to be in further distances with the advent of smartphones.

- 1) diversification
- 2) division
- 3) intervention
- 4) interference
- 5) configuration

14.)

Inner thoughts, overall, are hindered by common knowledge, which is fashioned by the gathered single knowledge. To be an active player in the ongoing improvement of collective perspective, we should be aware that significant progression in liberal arts took place to induce the development of common sense. Common sense, which illustrates the average perception level of the public, has a far-reaching position in choosing what to do and how, etc. Thanks to the development of the liberal arts, people have become able to consider how to address themselves to pursue things that fit collective wisdom. It might be a question of what kind of correlation between collective wisdom and liberal arts exists; however, there is a definite relationship between them, as liberal arts form individuals' knowledge that eventually gathers around to make conventional wisdom. In the case of gathered senses becoming a common idea, while it would be efficient to unify innumerable opinions, it is unknown if it would manage the consciousness of each individual in precision. In order to be an active agent seeking the natural perspective in and of itself, it would be crucial to have a wide range of visions that puts the individuals to an end in itself regardless of the common ideas, etc. In conclusion, while common knowledge is decisive, it should _____.

- 1) not grow up to override individuals' perspectives
- 2) ensure individuals to form collective wisdom
- 3) be directly connected to the individual senses
- 4) not engage with liberal arts
- 5) be considered critical to the liberty

15.)

In academic writing, it would be essential to have a formal tone, with plausible reasons to support the main idea. Starting with intriguing phrases, the writer develops the paragraph with coherent logic, in a consistent effort to keep the style equal. Not too convoluted, but a thought-provoking passage would be the best one likely to be praised by the readers. To manage writers themselves to make the words cohesive, they should try to point out their ideas without logical errors, while handing out sensible reasons and examples with clear voices. Readers would have an altered perspective on the given material as they would be influenced by the writer's ideas. It might lead to an issue since the readers would have no idea if the given definition of the material would be reasonable and makes sense with legitimate support. While there are various pieces with logical senses, there are also those that can possibly blind the readers since the writers are aware of the fact that the readers would be passive when they read the article they wrote. Above all, readers should have _____ views as there is always a chance for the pieces to make misunderstandings about the not only for materials but also the general view upon the real world.

- 1) biased
- 2) impartial
- 3) prudent
- 4) positive
- 5) inflexible

16.)

Although having the power to manage time spent on impractical matters is a certain privilege for those present-day people living in a current society, not all people are using the most efficient attitude overall, which makes it easy to see that those who would rather suffer from the pit of hard work than have themselves in the comfortable spaces are likely to have the competence over congestions. Seemingly all people have equal time, while the time itself goes differently. Paradoxically, those who have so many things to do, or those who are in the lower level -in general- stand a chance to fashion methods to overcome the facing problems, such as being chased by what they should have already submitted but to solve the problem with efforts, while for those who have relatively sufficient time, or those who are in the higher level, are likely to say that they have higher chances to _____. Those who had already taken over the higher places than others have leisure only for the hindrance of success such as extravagances and gratifications. To the extent of self-management, it is time to be rated in the highest position above other factors to cultivate an impressive persona. No direct connection seems to be between time and having an impression on the public, while there is a disproportionate correlation between time and higher chances to manage oneself.

- 1) avoid difficulties during congestions
- 2) spend time for themselves
- 3) play crucial roles in the specific time
- 4) manage themselves to be impressive
- 5) stay in the successful time

17.)

In retrospect in the early stages of socialization, individuals were simply counting on others to go along with them since they had no idea about how the common framework works and the fact that common perceptual structure conduces to the greater unification. Needless to say, everyone goes through those early phases when they have a hard time getting over their obstinate refusal to embrace uneasiness. To regard others as an undeniably important factor when they have to judge how to behave toward others, in the commonly defined sensible manners, they must take their attitude widely open toward the plausible perspective -in terms of individuals. The group's paradigm contains widely applicable norms such as how to act when others approach, greet others in the first meeting, etc. It seemingly has a compulsory manner to make uniformity across society, while it also seems to present individuals to conform to the collective cognitive structure. From the perspective of individuals, they would not perceive what they are truly is since they are continuously influenced by the massive logic of the group. True nature, after undergoing the early stages, is considered a matter that is inherently _____ to define in and of itself.

- 1) disrupted
- 2) integrated
- 3) tangled
- 4) imposed
- 5) connected

18.)

If the ones were likely to have a hard time interpreting the situation, the preconceived notions, or "stereotypes" are what provoke them to remind of various manners to address the case in case they perceive the lack of their grasp, operating in the process of _____ the experiences and newly embraced knowledge. When individuals are demanded to stimulate their framework to engage with the materials, the cognitive structure takes the stimuli into the process of reconstitution since each people cannot define the materials in and of themselves as their views are already influenced by numerous experiences. Unique views of each people are fashioned in distinctive ways compared to each other since how the perceptual system that has something to do with shaping the given material, applies to the world and how it is defined by individuals differs. The given situation can be challenging for the participants to comprehend from a wide range of perspectives, eventually inducing them to utilize the existing paradigm in order to obtain general efficacy. In order to have the comprehensive skill to adjust to the situation, individuals should know how to integrate and mix the original knowledge and the newly accepted information. Undergoing the process of redefining the event, they stand a higher chance to approach the ultimate goal; prompt, yet precise. To get the right idea that goes along with the original perspective, the definition of the problem changes to fit the context of their norms.

- 1) redefining
- 2) perceiving
- 3) accepting
- 4) intertwining
- 5) understanding

19.)

A progressive policy with a collective framework that discounts minorities tends to induce breakup in society. Obsessed with the spread of prosperity, freedom has degenerated in the discriminating interaction of societal agreement. Collective wisdom targets most people to blend into the shared idea without respect for those assumed to have no crucial roles in the decision-making process. Participating in the process of addressing critical factors that directly influence the overall atmosphere of the group leads to the ultimate confusion about the vision in case of excluding non-dominant groups. The basis of the prevalent notion in the group stems from the need to integrate various opinions into common sense. With the development of measures to be conscious of what the ordinaries prioritize, the shared framework evolved to play a significant role in giving shape to general opinions. As the world heads toward the congestion of inner conflicts, the advancement of means to collect what citizenry makes voices for _____.

- 1) demonstrates how hierarchism got formed
- 2) induces new kind of problem
- 3) illustrates how discord forms
- 4) prevents division of groups
- 5) reveals the paradox of integration

20.)

Dreams or goals are known to be effective, yet, it should not be ignored that it is _____ since they are decisive factors in individuals' envisioning process. Hopes are fashioned through numerous experiences and an individual's subjective point of view; therefore, it is inevitable for the ideals to have distance from others. Others would have gone through different events, leading them to form a unique vision of their dreams, and slightly reluctant views upon others to make negative voices on the different dreams as the experiences they've undergone would not fit into those of others. Though the ideals and future hopes might have some similar connective aspects, it does no doubt to consider that each person should have formed distinctive perspectives. Others' judgment over one's idea is impartial as the basis for judgment forms in distance with every particular. To the extent of individuals, the dreams are ideal and unreal, unknown of their likelihood before it gets realized, at last. The gap between the present and the uncertain future would not allow each people to manage the possibility of being frustrated prudently. However, it is still crucial not to abandon dreams as it would be an impetus for stimulating oneself to accelerate for their dreams.

- 1) pessimistic
- 2) unbiased
- 3) optimistic
- 4) essential
- 5) double-edged
